PING ERROR TEST

Explain proper scenario for following ping errors ?

Destination host unreachable

- when we try to ping some IP in our PC
- If there's no route for the Destination IP in our system route table,
- No Default gateway given to the PC,
- This error will be shown

Request timed out

ECHO Data will be successfully sent from the sender PC

- ~~IF~~ ECHO Data also reaches the router/PC in same case same network if the Destination PC
- No Route from the Destination PC cause this error

Reply from some ip destination host unreachable

- ECHO Successfully leaves the PC and also reaches the router,
- But there's no route for the Destination IP in the routing table, so router will drop the ECHO and shows the error in the PC

TTL expired

- Two or more ^{router} misconfigured the gateway causing the Echo/Packet to send back and forth causing a L3 Looping, each time the packet passes through router TTL values -1, this loop happens until the TTL value becomes 0 after that only this error message is shown "TTL expired"
